DETAILED ACTION

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 17-23, 25-27, 30-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Enon et al. (6,359,675).

Enon et al. (6,359,675) discloses a motion picture camera comprising:

a film magazine (30), from which a motion picture film to be exposed having a carrier layer and a light-sensitive emulsion layer is discharged and is moved over a film transport path past a picture window for picture exposure and a device (4, 5) for separating foreign bodies on one of one or both surfaces of the motion picture film being disposed in the film transport path between the film supply reel in the film magazine and the picture window,

wherein the separating device comprises a cleaning sleeves (4, 5) having a particle pickup means and rolling on both side of the motion picture film, and which act as film feed rollers for assisting in transport of the film. As noted in Column 4 Lines 1-5, a sticky (adhesive) material in present on the sleeves.

The structure illustrated in figure 1 illustrates a structure which may be taken apart. The cleaning sleeves are placed on the feed rollers (2,3) in a "replaceable" Application/Control Number: 10/573,612

manner since any physical structure may be deemed "replaceable". Column 5 Lines 15-17 also states the removablility of the cleaning device. Replacing the sleeves replaces the adhesive layer. The rollers obviously would be placed preceding the exposure aperture (2)) in order to perform the cleaning before exposure.

Enon does not specifically illustrate feed and take up reels.

However, it would have been obvious to one of ordinary skill in the art to provide the film containing cartridge with such reels, as is old and well known in the art, in order to allow for the retention and transport of a large amount of film.

Allowable Subject Matter

 Claims 24, 28-29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
